

ENVIRONMENTAL POLICY

Protecting Health. Preserving the Planet.

At IVC, our mission is to support health and well-being — and that commitment extends to the health of the planet. As a manufacturer of high-quality vitamins and nutritional supplements, we recognize our responsibility to operate sustainably and ethically throughout our supply chain. Our manufacturing sites are committed to operating in a responsible manner and protecting the environment by maintaining regulatory compliance.

WE ARE COMMITTED TO:

Sustainable Sourcing

We work with trusted suppliers who share our commitment to environmentally responsible farming, harvesting, and raw material sourcing practices. We currently source 100% RSPO mass balanced Palm Oil.

Clean Manufacturing

IVC aims to reduce emissions, conserve water and energy, and limit waste by improving operational environmental efficiency. The partnership with CarbonCents is a crucial step toward achieving net-zero carbon emissions, enhancing emissions tracking, and reinforcing energy conservation and waste management practices. This collaboration provides advanced data tools for informed decision-making, operational efficiency, and cost savings, enabling measurable progress in sustainability efforts.

Transparency & Accountability

We maintain open communication with customers, partners, and communities about our environmental practices and progress toward sustainability goals. IVC is an engaging partner with our many customers' sustainability reporting systems and goals.

Waste Reduction

From production to packaging, we actively minimize waste and seek recyclable or biodegradable alternatives whenever possible. At IVC we are actively looking for ways to reduce and divert waste from landfills.

Our Greenville SC sites received the Compliance Excellence Awards from ReWa, Greenville County Renewable Water Resource. IVC maintained permit compliance throughout the year in Greenville County.

Regulatory Compliance

We meet or exceed all relevant environmental regulations and Good Manufacturing Practices (GMP) for dietary supplements and nutraceuticals. IVC has built our way of doing business around the requirements established by our federal, state and local regulations and permits.

Product Stewardship

We design our products and packaging with sustainability in mind - promoting responsible use, storage, and disposal. Packaging and design optimization that supports sustainability and uses PCR where possible. We have made specific commitments to use 25% PCR bottles and to reduce 15% of our virgin plastic packaging by 2030.

Our Promise: To nourish people and protect the planet by making conscious, science-backed choices every step of the way. Our commitment to sustainability isn't just good business - it's part of our promise to you and future generations. When you choose IVC, you're choosing a product that supports health and honors the Earth.
